# COMMERCIAL PROOFER

## MIFJ-16

<b>Model</b>	MIFJ-16
<b>Dimension</b>	500mmL x 720mmW x 1985mmH
<b>Capacity</b>	60Kg/hr / 16 Trays
<b>Temperature Range</b>	30°C ~ 80°C
<b>Voltage</b>	220V
<b>Frequency</b>	60Hz
<b>Phase</b>	1Ph
<b>Power Input</b>	1.4 kW
<b>Ampere</b>	5.8 A
<b>Material</b>	Stainless Steel 201, Metal

## FEATURES

- Proofer is made of stainless steel. Water is heated by electric thermal and then produce a steam inside the chamber.
- Humidity in the chamber can reach up to 80% to 85%. The control temperature is between 35°C to 40°C which is suitable for fermenting.
- Add dry heating tube and heating plate to keep the temperature at its best for fermenting effect.
- Hot air convection in the chamber
- Even temperature inside and precise control of temperature and humidity.
- Door is easy to open and close.
- Multi-layer proofer which can accommodate a large capacity.

## INSTALLATION

1. Take out the foot tube and fix it. Then adjust it to balance. After balancing the foot tube, fix the rack tube.
2. Connect anti-leakage switch directly or with socket. For safety, make sure that you inserted the power plug into the anti-leakage socket.
3. Set the proofer balance. Reserve enough space for your operation.

## OPERATING INSTRUCTIONS

1. Add water in the water chamber before using. Water over the heating tube prevents it from dry heating.
2. Connect power. Indicator(red) and proofer is on standby mode.
3. Open the atomizer clockwise. atomizer indicator(yellow) is on. Electric thermal tube will start working. Set temperature to 100°C. Adjust the temperature to 80°C after water boiled. Indicator off means proofer will stop working and enter auto automizing convection state.
